Hamza BAHALLOUL

Final-year cybersecurity engineering student – 6-month final-year internship (PFE)
GRC – ISO 27001 – EBIOS RM – DevSecOps – Web/API Pentesting – Threat Intelligence

Available January to July 2027 (6 months), on site in France – internship agreement provided by ENSA

Profile

Final-year cybersecurity engineering student (five-year engineering school, Master's level, graduating July 2027), focused on compliance, risk management and security automation, ranked **8th (Top 10) at the SANS Institute Cyber Quest CTF** (72-hour offensive security competition). During my internship, I designed and built alone a multi-tenant EASM/CTI SaaS; in personal projects, a "compliance as code" platform (EBIOS RM, ISO 27001) and an intentionally vulnerable RAG application that I audited and then hardened. I can link a technical vulnerability to a business risk and present the result to both technical and decision-making audiences.

Education

Engineering Cycle – Cybersecurity and Digital Trust 10/2024 – 07/2027 | El Jadida, Morocco
National School of Applied Sciences (ENSA), public engineering school – integrated preparatory cycle 10/2021 – 07/2024

Professional Experience & Competitions

8th place (Top 10) – Cyber Quest CTF, 72-hour competition 10/2026
SANS Institute
- Intensive international competition: web & API exploitation, binary exploitation (buffer overflows, ROP chains), reverse engineering of obfuscated code, digital forensics and cryptanalysis.

Cybersecurity Engineering Intern (EASM & CTI), 2 months 07/2026 – 09/2026 | Rabat, Morocco
AZunix
- Designed and developed alone, end to end, **Cyber360**, a multi-tenant SaaS for **EASM** and **CTI**: detection of forgotten exposed assets (*Shadow IT*, subdomains) and prioritization of real threats against *alert fatigue*.
- **Security by design:** strict per-customer data isolation, JWT authentication, RBAC (Admin/Analyst); asynchronous backend with FastAPI, Celery and Redis on Docker Compose.
- Deterministic **Risk Engine** (CVSS-style scoring) cross-referencing vulnerabilities with **MITRE ATT&CK**; CTI correlation 237 times faster (from 2.28 s to 9.6 ms on a benchmark of 50,000 vulnerabilities); LLM-generated executive summaries (Gemini).

Networks and Security Intern 07/2025 – 08/2025 | El Jadida, Morocco
TAQA Morocco
- Secured an inter-site network infrastructure: VLAN, IPsec VPN, FortiGate firewalls, Active Directory, lab simulation in GNS3.

Personal (2026, applying the engineering curriculum) and academic projects

TenantGuard (personal project): RAG API – DevSecOps, Pentest & Detection 08/2026 – 10/2026
- 6-job **GitHub Actions** pipeline (SAST, SCA, secrets, image scan, DAST, SBOM); the Trivy scan blocks the build on critical or high fixable findings; actions pinned by SHA.
- **Web/API pentest:** 8 documented vulnerabilities, 7 exploited (cross-tenant IDOR, JWT forgery, path traversal, prompt injection), 2 critical (CVSS 9.1); CVSS v3.1 / OWASP audit report; fixes verified by replay, 25 tests.
- **7 detection rules** mapped to **MITRE ATT&CK** (Loki, Grafana), provisioned as code; intrusion simulation: 46.5 s MTTD, 3 of 4 phases detected (1 partially); runbooks and post-mortem.

GRC-as-Code (personal project): Security governance, medical imaging center 07/2026 – 09/2026
- Compliance treated as code: risks, controls and matrices in YAML, versioned in Git, with automated evaluation; SARIF parser linking real vulnerabilities (Trivy) to risk scenarios: residual risk recomputed in seconds, versus several days manually.
- **EBIOS RM** risk analysis (10 scenarios) and SoA covering the **93 ISO 27001:2022 controls**, audit-ready; CISO dashboard (**NIS2**, GDPR, HDS, NIST CSF 2.0).

CheatTrace (academic project): AI-powered fraud-detection forensic platform 02/2026 – 05/2026
- CrewAI agents, multimodal OCR and stylometry; collusion mapping with graphs (1,225 pairs compared for 50 students); validated on 95+ investigations.

Technical Skills

Governance, Risk & Compliance: ISO 27001:2022, EBIOS RM, NIS2, GDPR, HDS, NIST CSF 2.0, risk analysis, SoA, STRIDE.
Offensive & Defensive Security: web/API pentesting (Burp Suite, jwt_tool, ffuf), binary exploitation (buffer overflow, ROP chains), reverse engineering, forensics, cryptanalysis, OWASP API & LLM Top 10, CVSS, MITRE ATT&CK, CTI, EASM, detection (Loki, Grafana).
DevSecOps & Development: GitLab CI, Semgrep, Gitleaks, Trivy, OWASP ZAP, SBOM; Python (FastAPI, Celery), SQL, TypeScript/React, Docker.
Systems, Networks & AI: Linux (Kali), Windows, TCP/IP, IPsec, VLAN, FortiGate, Active Directory, Wireshark; LLMs (Gemini), RAG; PostgreSQL.

Certifications, Awards, Associations and Languages

Award: 8th place internationally (Top 10) – Cyber Quest CTF (SANS Institute, 10/2026)
Certifications: ISO/IEC 27001 Information Security Associate (SkillFront) | Fortinet Certified Fundamentals Cybersecurity | AWS Academy Graduate – Engineering Operations Technicians | ISC2 Candidate | Ethical Hacker (Cisco Networking Academy)
Associations: Akasec – 1337 CyberSecurity Club (Bootcamp) | Ship, non-profit association (Treasurer)
Languages: Arabic (native) | French (C1, language of instruction) | English (C1)
